

The Window Room

One review. A clear decision.

Discuss the material direction for a room to read, gather and store everyday belongings.

Quiet Oak continues into the illustrative drawings.

Example scope: concept discussion only.
Survey, supplier selection and technical review remain outstanding.

AI-generated illustration. Not verified application output or completed client work.

Keep the brief in view

Priorities

Reading, conversation and storage. Confirm the household routines behind each activity.

Retained conditions

Existing oak floor, window and entrance positions. Condition and dimensions need verification.

Source information

Nominal room: 5000 x 4000 mm. This is teaching data, not a measured survey.

Outside this review

No product approval, purchase authorization or construction instruction. Budget and dates are unresolved.

Quiet Oak

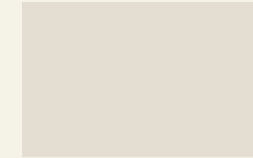

Selected illustrative direction. Retain the oak floor; explore pale oak, mineral walls and linen.

Retained oak

Pale joinery

Mineral wall

Linen study

The design argument

A lighter material relationship supports reading and conversation while keeping the existing floor as the anchor.

Palette swatches are illustrative, not physical samples. AI-generated room imagery. Product, cost and technical suitability remain unresolved.

Deep Olive

Alternative study only. Darker joinery and olive upholstery; keep the same room and brief.

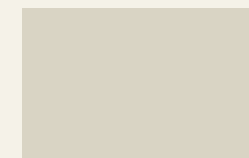

Retained oak

Dark joinery

Olive textile

Warm neutral

The design argument

A deeper contrast tests the atmosphere without silently changing the retained floor, openings or activities.

Palette swatches are illustrative, not physical samples. AI-generated room imagery. Product, cost and technical suitability remain unresolved.

Connect the layout to the records

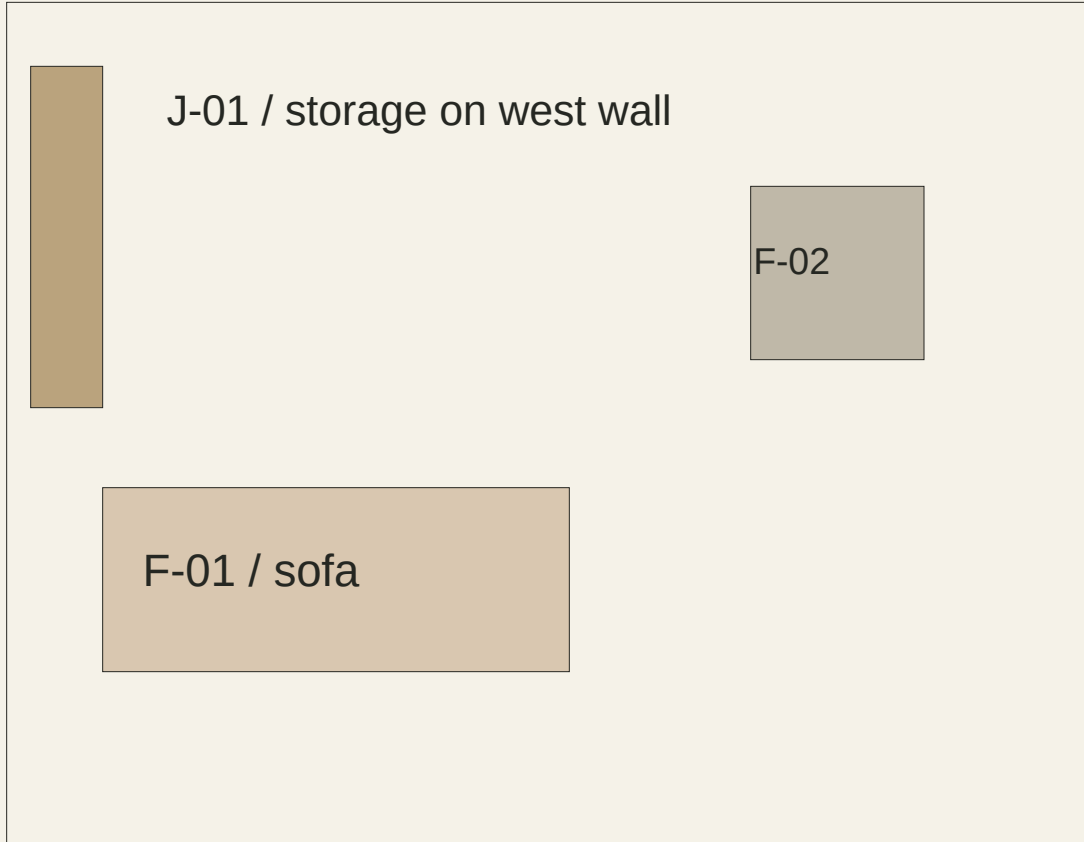

Diagram only. Do not scale or use for installation.

Cross-check before advancing

F-01: final product and dimensions unresolved.
F-02: seating location to review.
J-01: coordinate plan and elevation.
WR-01 / WR-02: illustrative, revision R0.

All shapes and labels on this slide are editable. Replace this teaching diagram with reviewed project information.

Make the open questions visible

Reference / selection	Next information request	Status
F-01 / proposed sofa	Final model, dimensions and fabric	Pending review
J-01 / pale oak joinery	Fabrication details and site interfaces	Pending review
FIN-01 / retained floor	Existing condition and protection	Survey needed
FIN-02 / wall finish	Area, substrate and actual product	Not specified

Keep the same references in the spec sheet, FF&E schedule and finish schedule.

Record the decision separately

Decision requested

Which material direction should be developed? Confirm the reasons, including any elements requiring another study.

Response and owner

No actual client response is represented. Record the appointed decision-maker and feedback in your own project record.

Affected records

Brief, concept record, F-01/J-01 specifications and relevant drawings. Preserve the prior revision.

Next action

Resolve source information and professional reviews before developing products or ordering. The sample does not authorize either.

Make this deck your own

Edit the native objects

Text, palette swatches, diagram shapes and placeholders are separate objects. Replace picture objects with your own licensed visuals.

Retain the audit trail

Keep sources, item references, units, revision and unresolved information together. Store client information in your own project system.

Continue the workflow

Use the DOCX storyboard to plan the narrative; the XLSX spec, FF&E and finish templates to record selections; and the handoff guide to prepare the next issue.
